# DASHBOARD

Power BI dashboards are a collection of visuals that compose, store, and show significant data from different information sources into one, easy-to-access place. You can share dashboards with others.

The dashboard must fit on a single page. It works like a blank canvas where you can put your visualizations.

**“BI is about providing the  
right data at the right time to  
the right people so that they  
can take the right decisions”**
